## **Abstract of the Disclosure**

Sheet coils and linear motors including same are disclosed. Also disclosed are stage units, exposure devices, and microelectronic-device manufacturing methods employing the linear motors. The linear motors exhibit reduced viscous resistance. The sheet coil includes at least one coil formed as a conductive wiring trace on an insulative film substrate. The coil includes at least one slit extending in the coil-winding direction. The slit usually separates the coil into multiple partial coils that are connected to AC current having the same phase.
